Retrieval systems convert source documents into evidence that a model can quote.
A page cap protects the process from unbounded downloads and runaway memory use.
Documents that carry figures and embedded fonts routinely exceed page limits.
Text extraction reads the content streams and reconstructs reading order.
Each request is bounded by a deadline so a slow origin cannot hold a worker.
Evidence selection keeps the passages that actually answer the question.
Retrieval systems convert source documents into evidence that a model can quote.
A page cap protects the process from unbounded downloads and runaway memory use.
